Data Products

DATA SCIENCE IN THE ENTERPRISE

Enterprise Environment

ENTERPRISE TOOLING

Server based

Cloud or on-premises (or both)

IT managed

Problem:

IT doesn't know R

R IN THE ENTERPRISE

Legitimacy

Recognize R as an analytic standard

Competencies

Understand and manage R tooling

Adoption

Rely on integrated R based solutions

Legitimacy

Recognize R an Analytic Standard

BRING R THROUGH THE FRONT DOOR

Show the value of R

R Markdown reports, dashboards, and presentations

Shiny apps

Plumber API's

Other data products

Get official recognition

Get resources

SOME PERSONAL HISTORY

	Consumer Research (c. 2004)	Advertising Network (c. 2008)	Client Services (c. 2011)
R Users	Me	Team	Global
R Tools	Desktop	Server	Cluster
Relationship with IT	None	Support	Partnership
Approved By	Manager	Owner	Corporate Process
Groups Influenced	Department	Organization	Customers

GETTING STARTED

Build a sandbox / lab box

Proof of concept

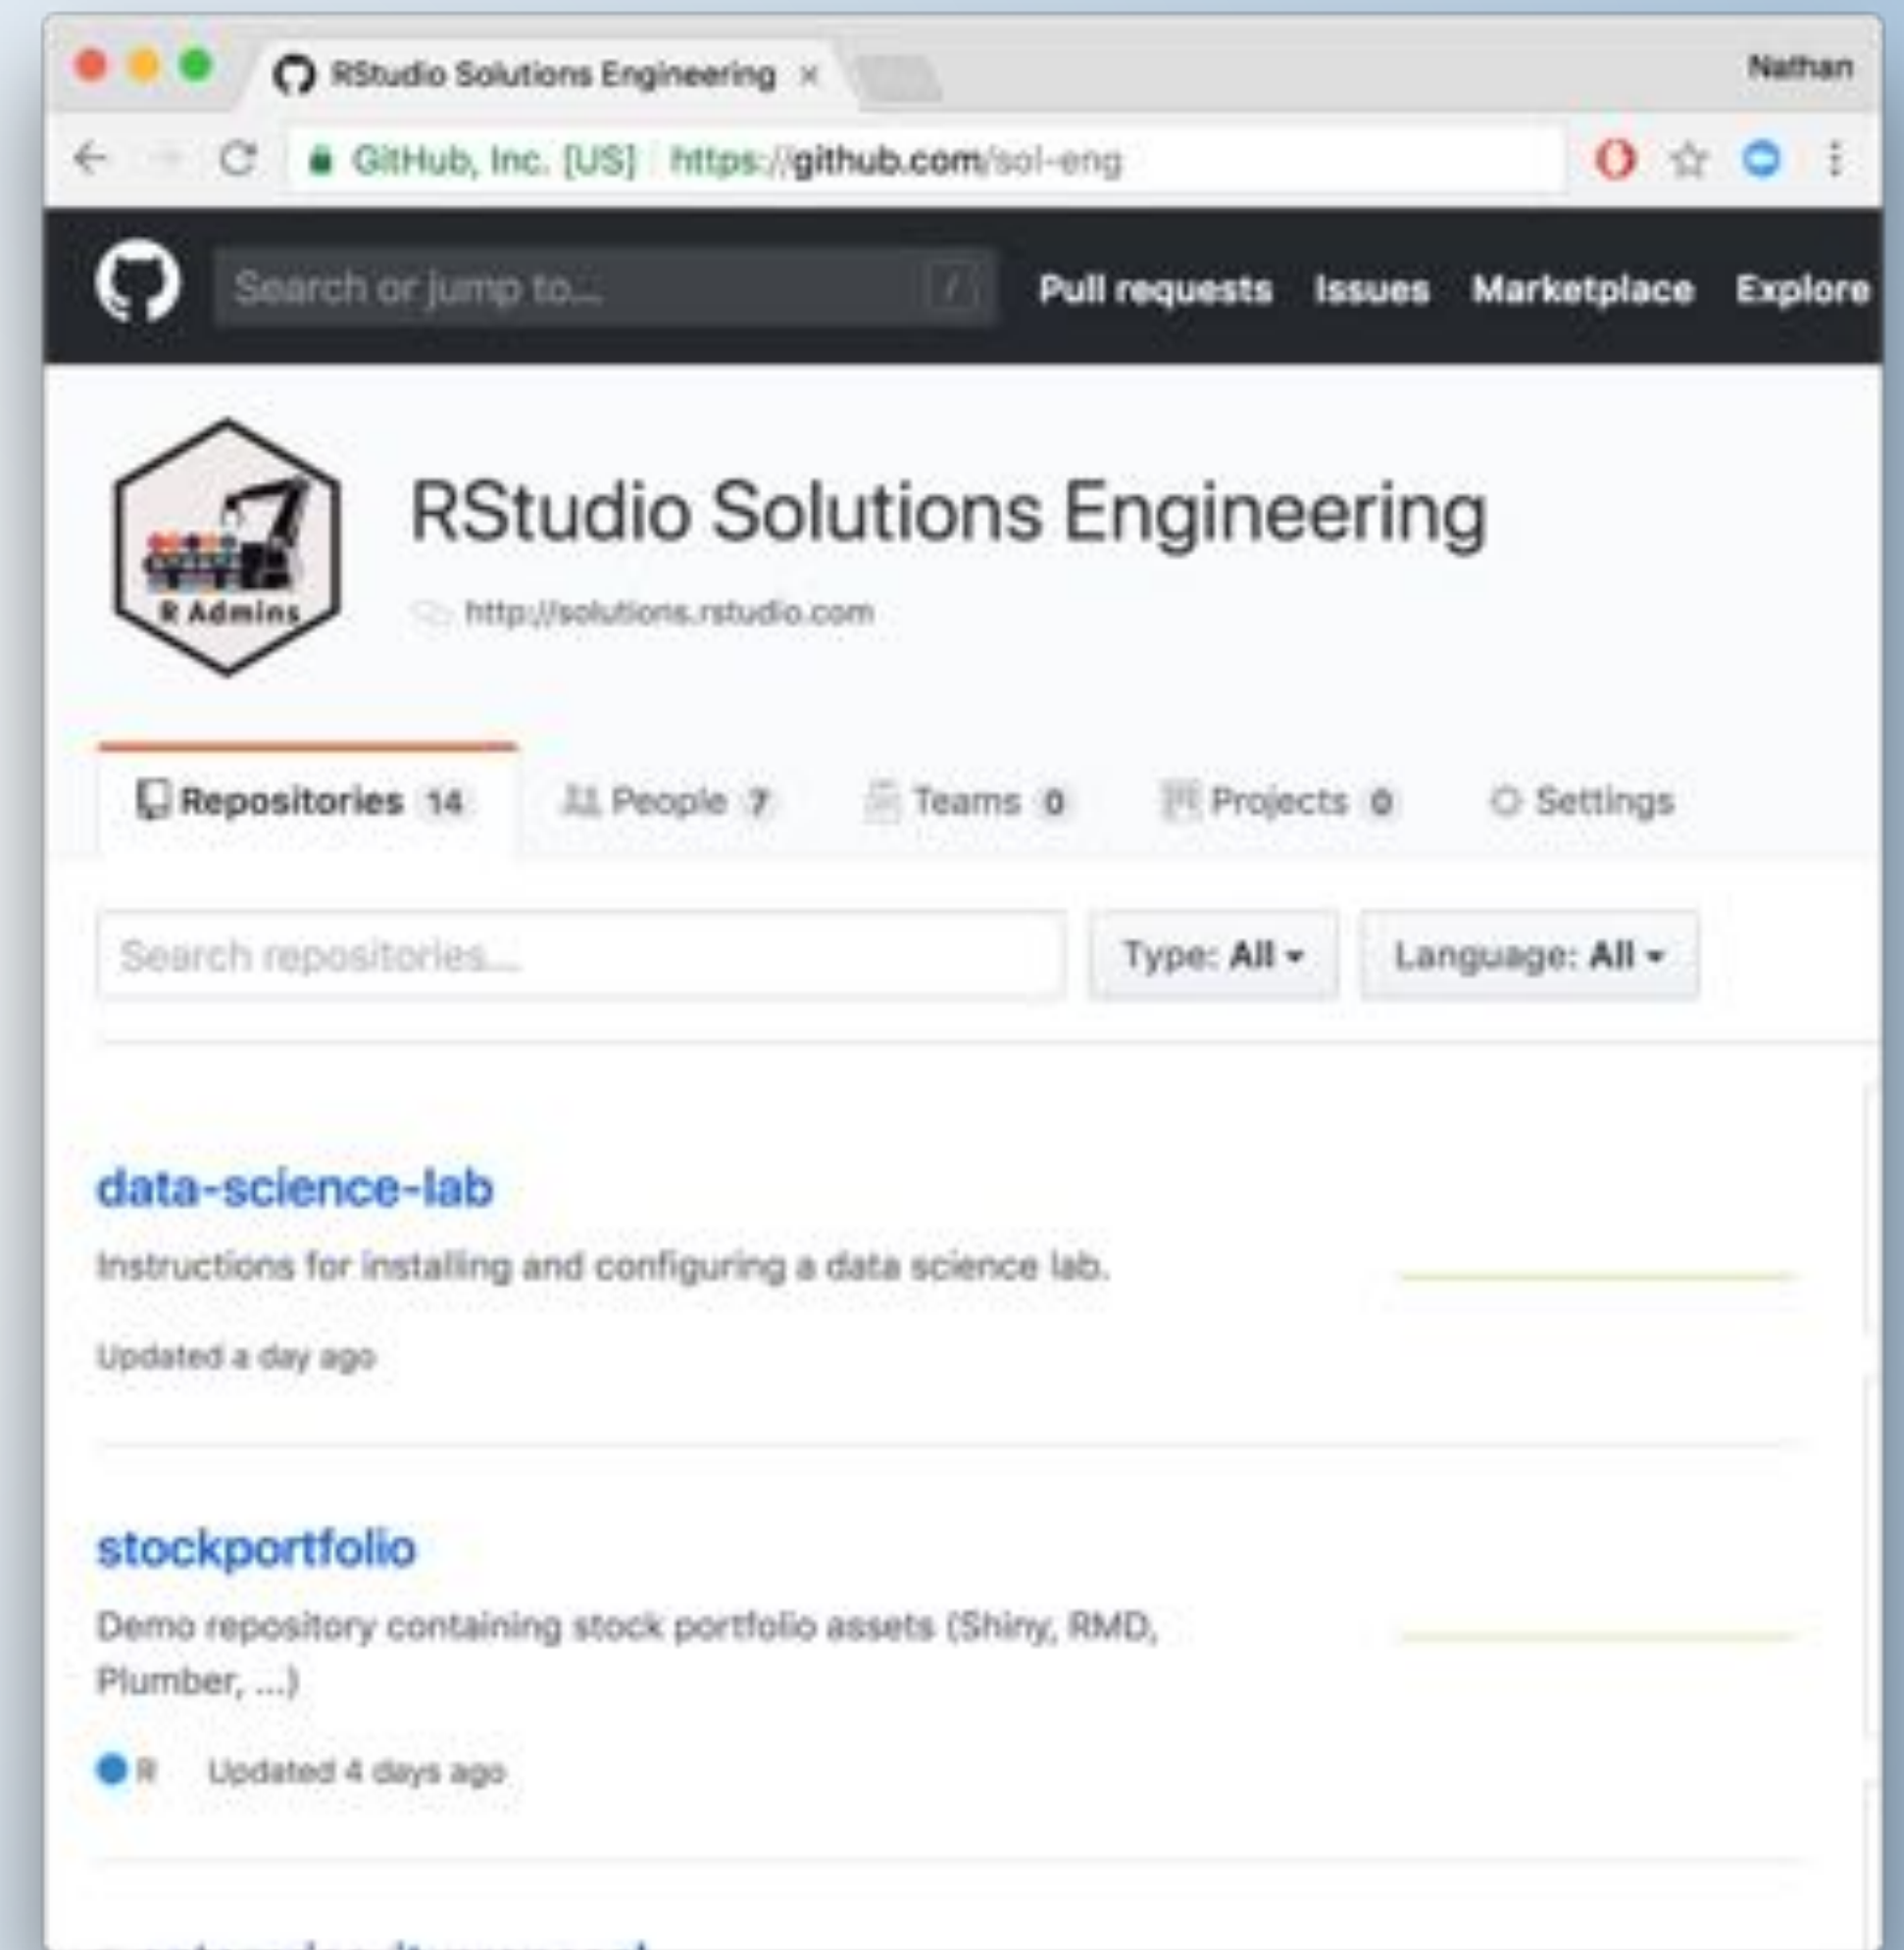

Show the value of R

R Markdown reports, dashboards, and presentations

Shiny apps

Plumber API's

Other data products

Competencies

Understand and Manage R tooling

RSTUDIO

We build tools for doing data science

Committed to open source

We hire great people

We sell professional products

RSTUDIO PRO PRODUCTS HELP YOU...

Access Spark from R

Connect you to your databases

Deploy your Shiny applications

Automate and distribute your reports

Secure, scale, and support your environment

RSTUDIO SERVER PRO

Develop at scale

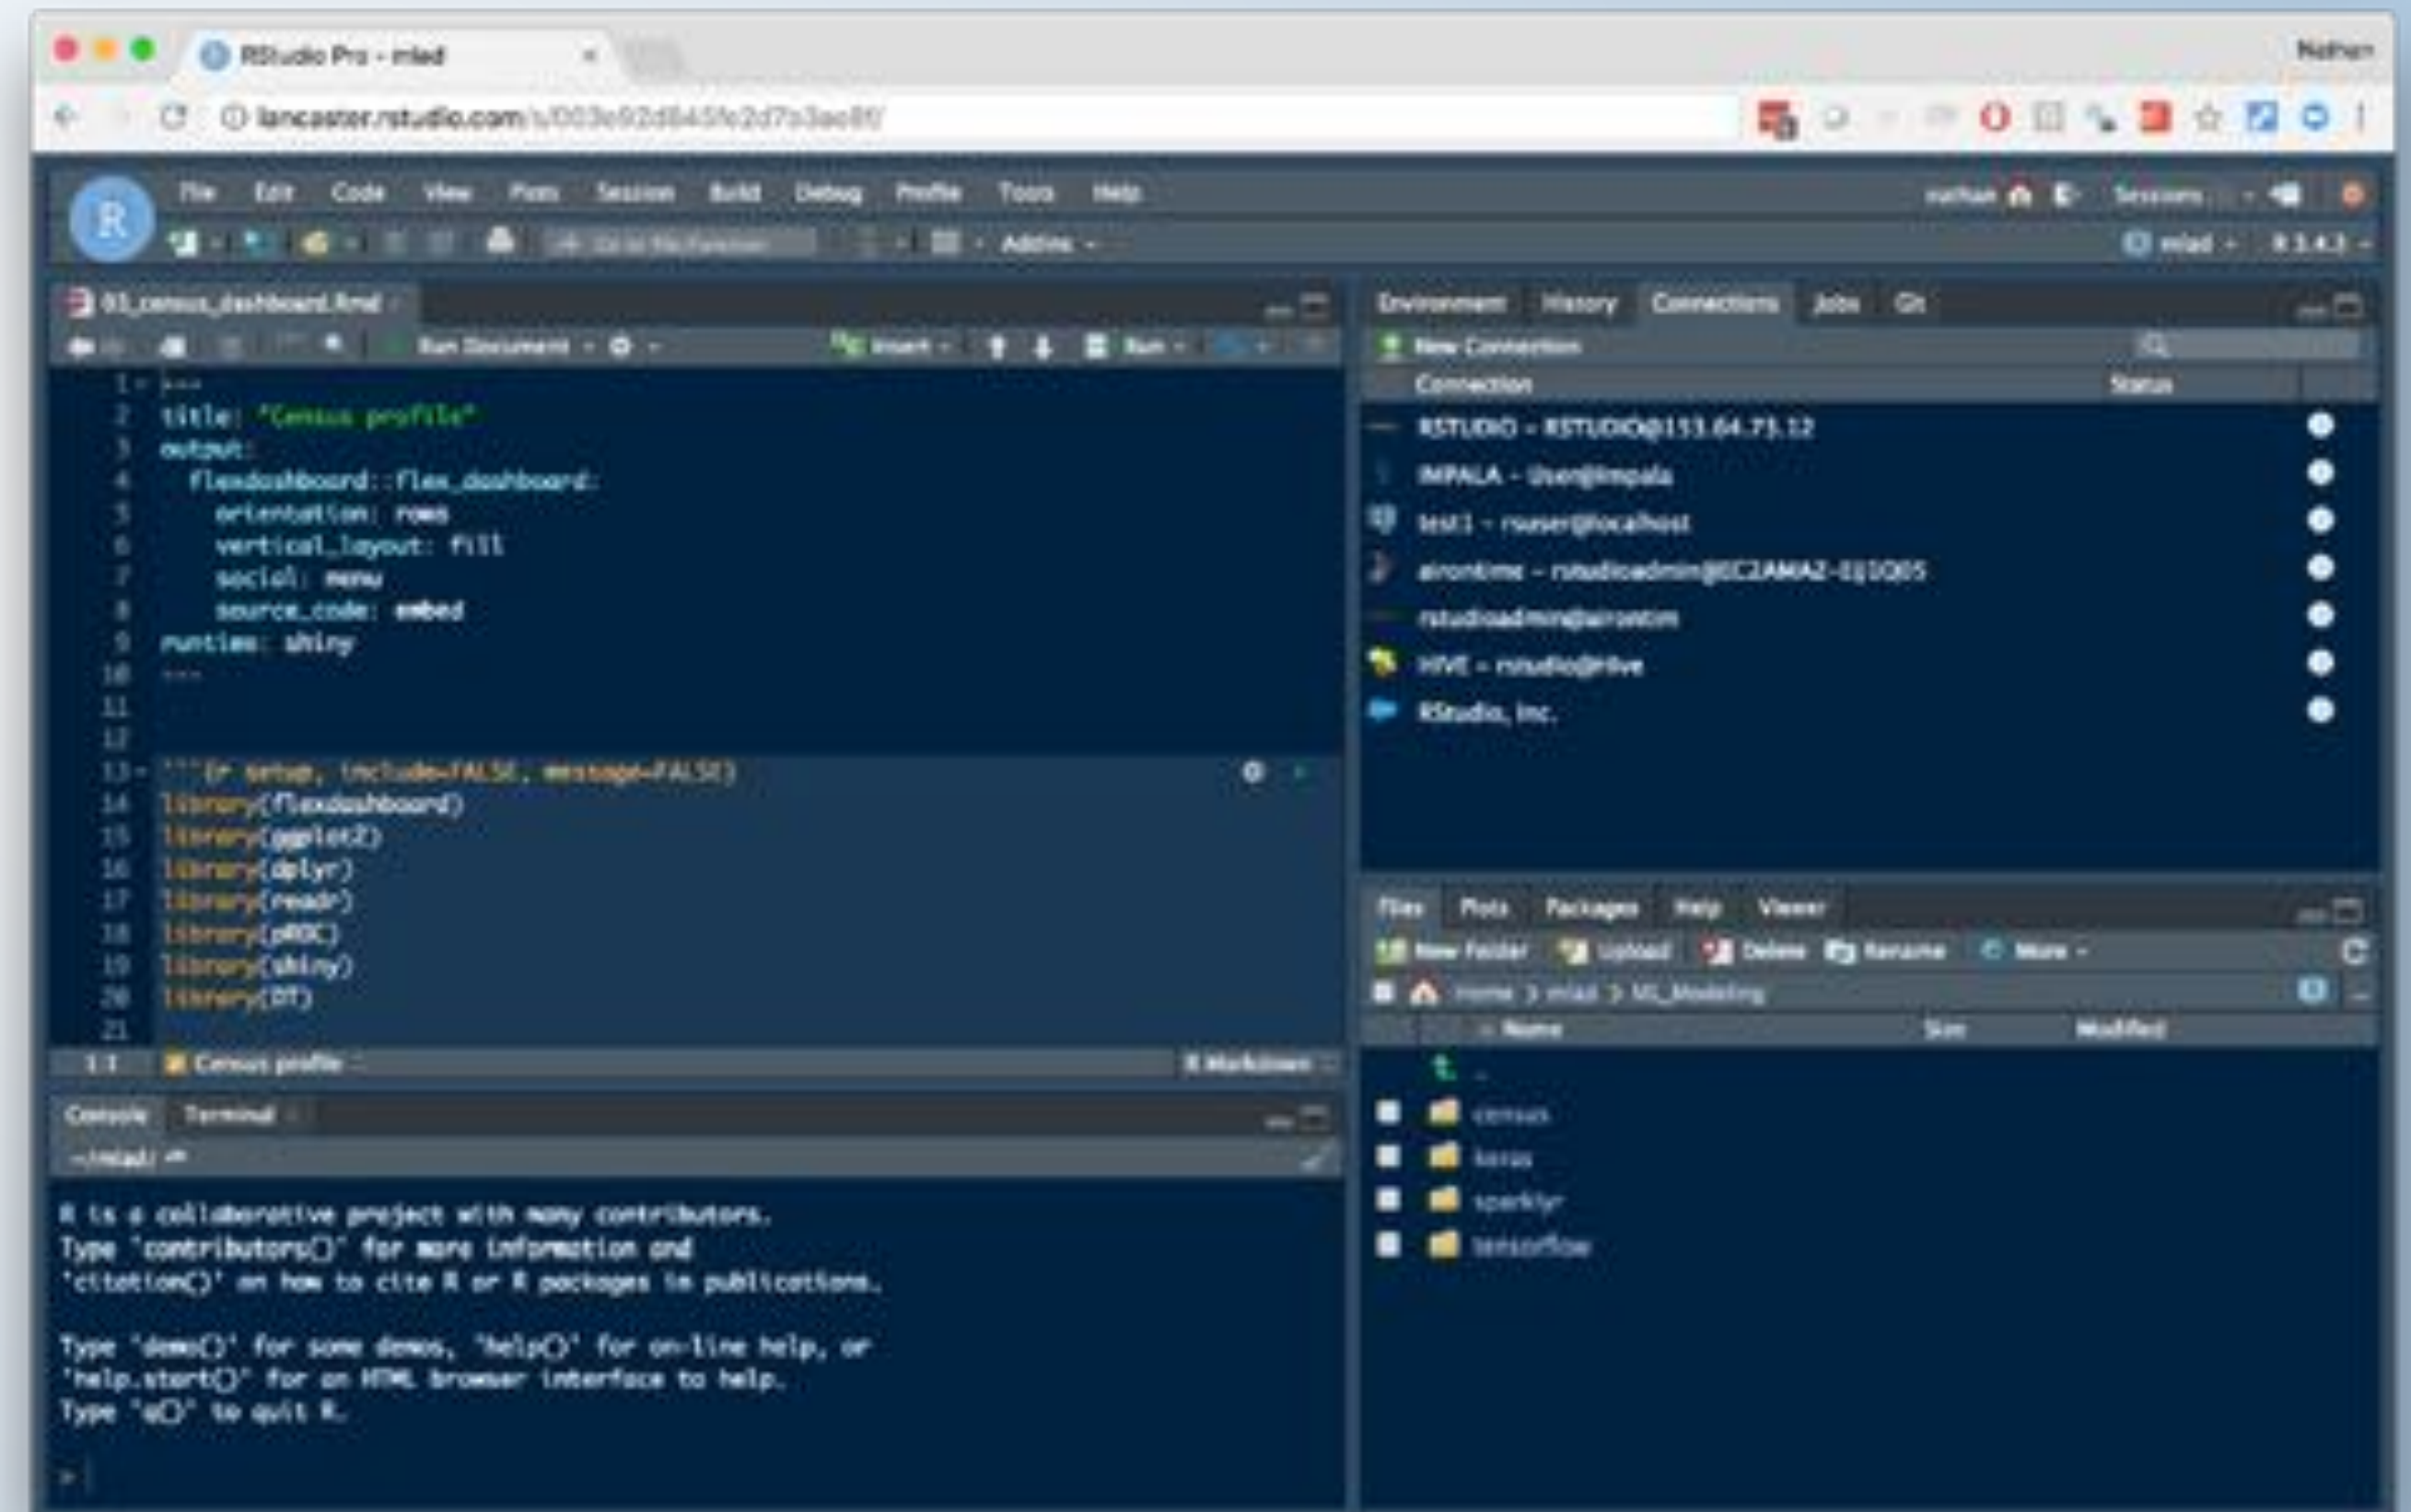

Runs securely in your
environment

Horizontally scalable

Connects to your databases

Easy to administration

Supported

RSTUDIO CONNECT

Run your artifacts at scale

On premises solution

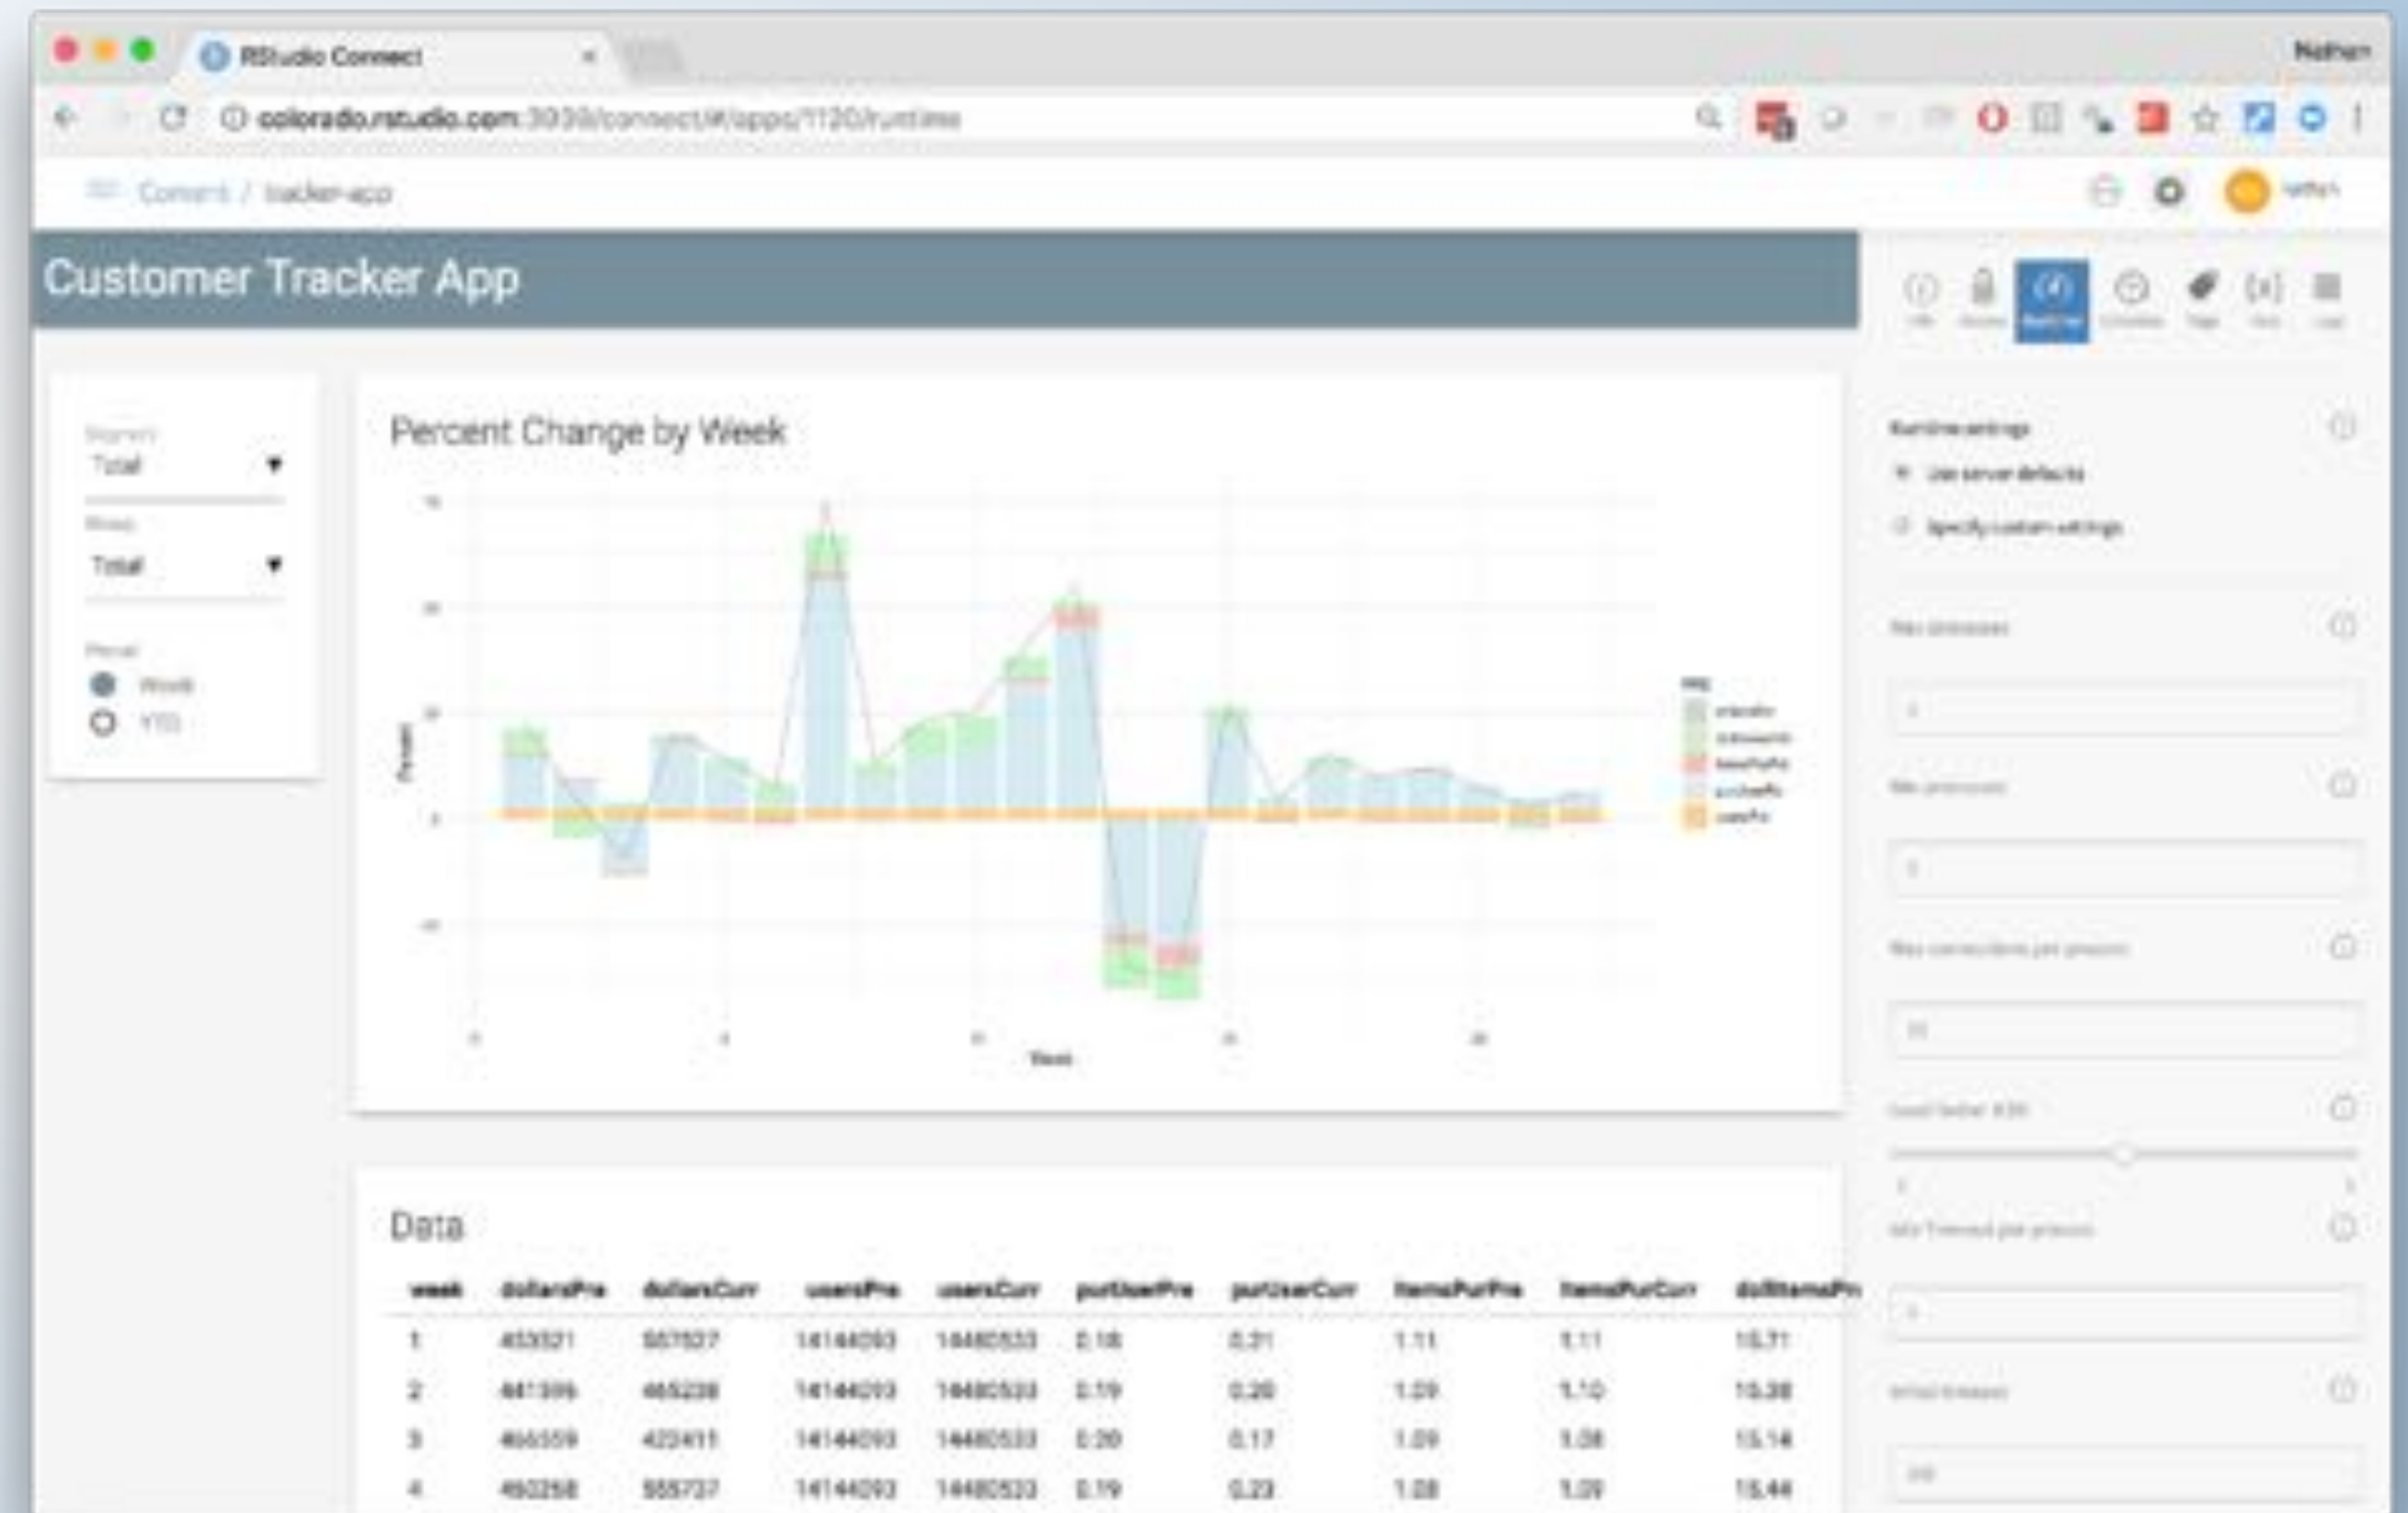

Push button publishing

Self managed content

Scheduled updates & distribution

Horizontally scalable

Secure and supported

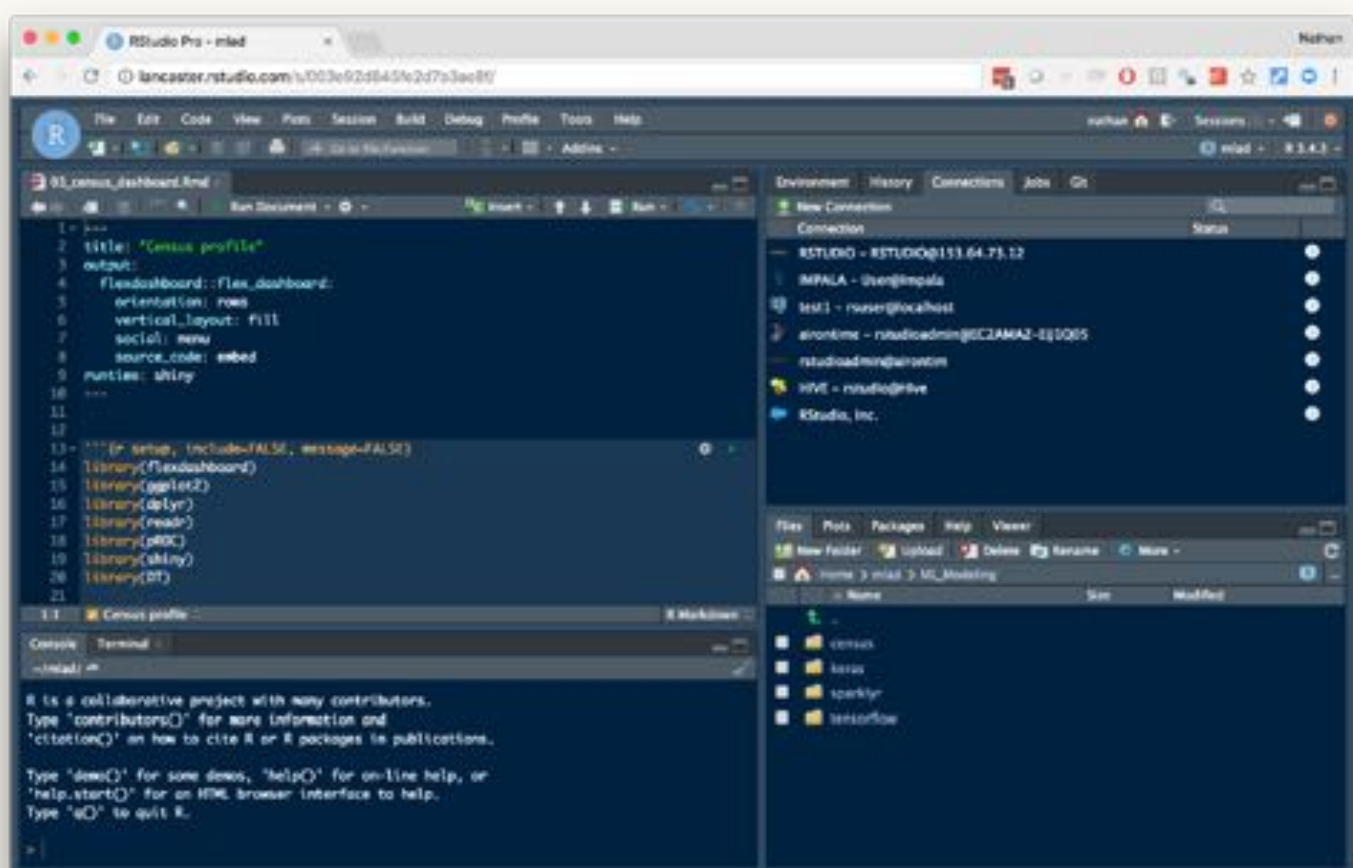

DATA SCIENCE LAB IN THE ENTERPRISE

Enterprise Environment

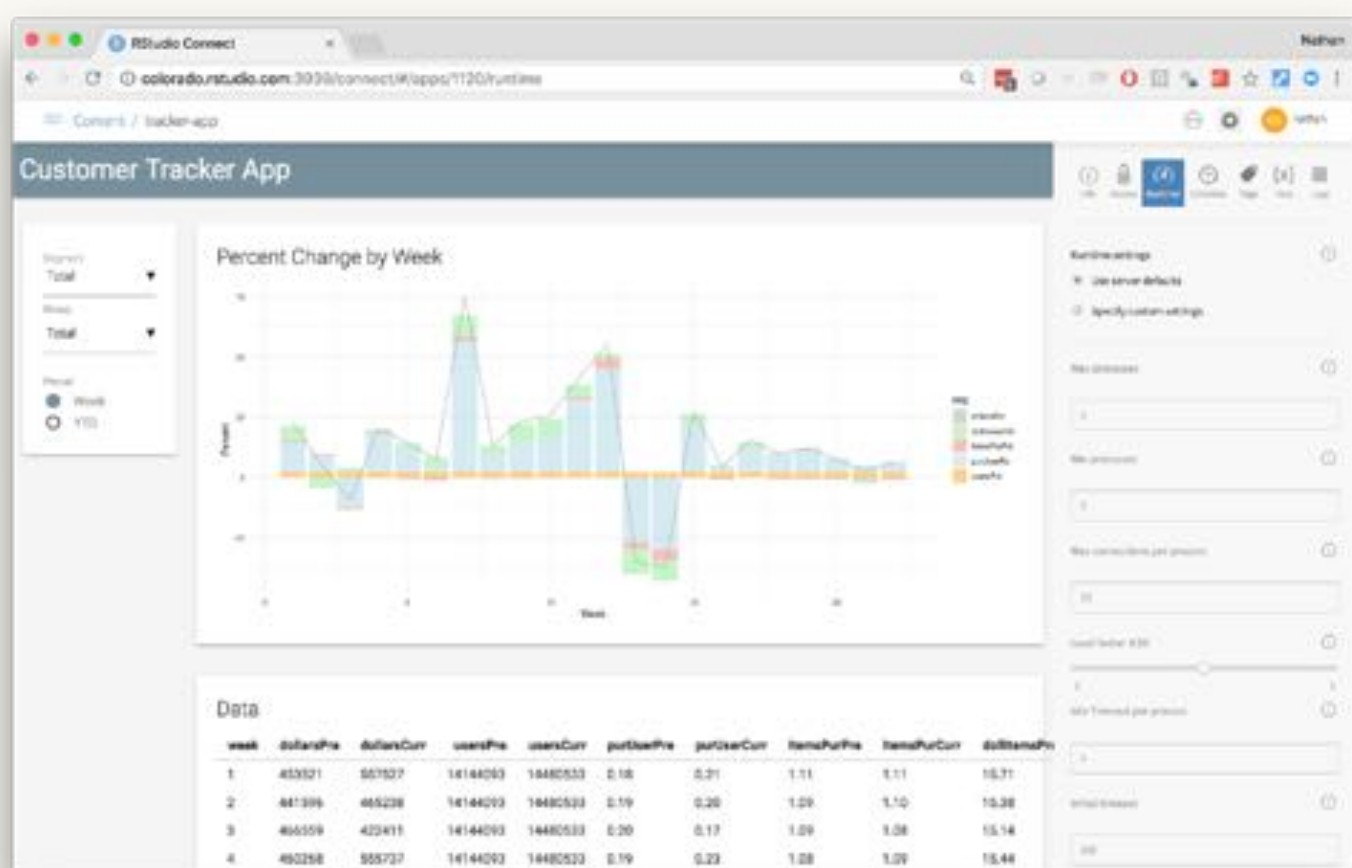

Data Sources

Data Science Lab

RStudio Server Pro
Build Artifacts

RStudio Connect
Run Artifacts

BI

In-Database

Reporting

Web

Workflows

API's

Programming Languages
Packages and dependencies
Operating Systems

Deploying Artifacts

DEPLOYMENT APPROACH

1. Build the bundle

Source Code

Data Files

Manifest

(Metadata and environment)

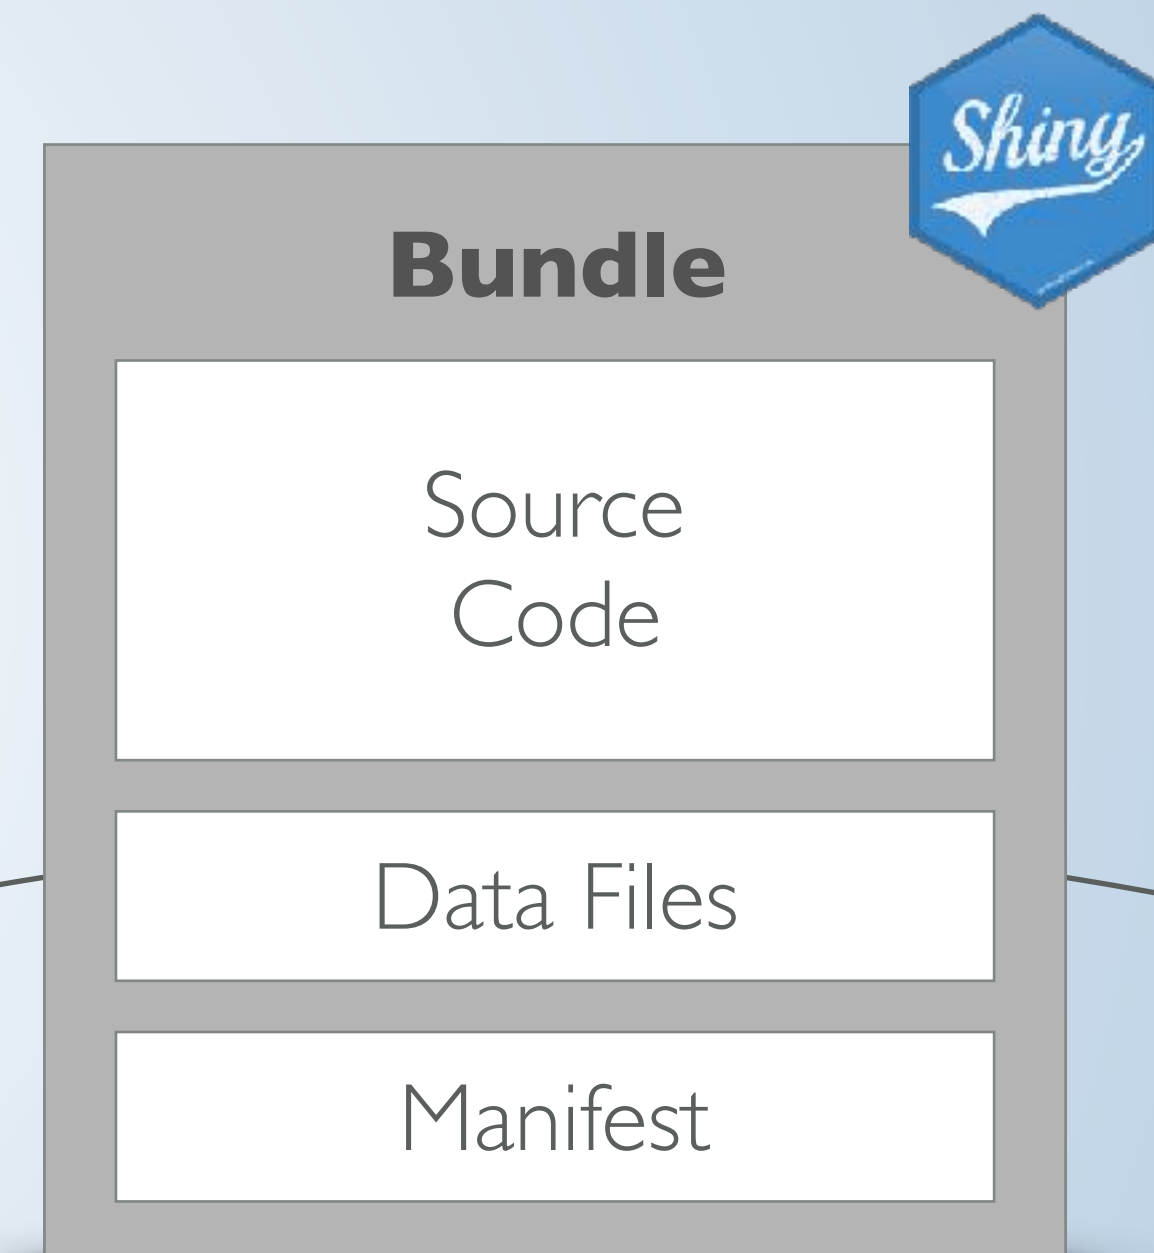

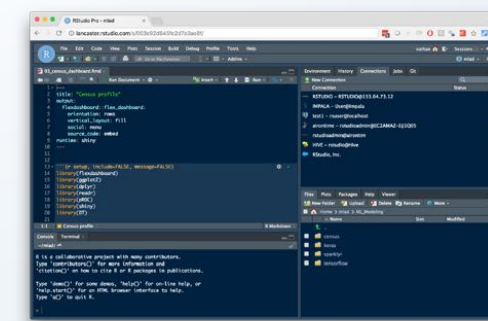

2. Push the bundle

3. Deploy the bundle

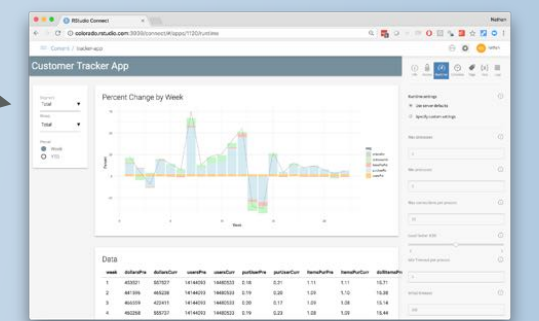

Parse the manifest

Packrat restore

RStudio Server Pro
Build Artifacts

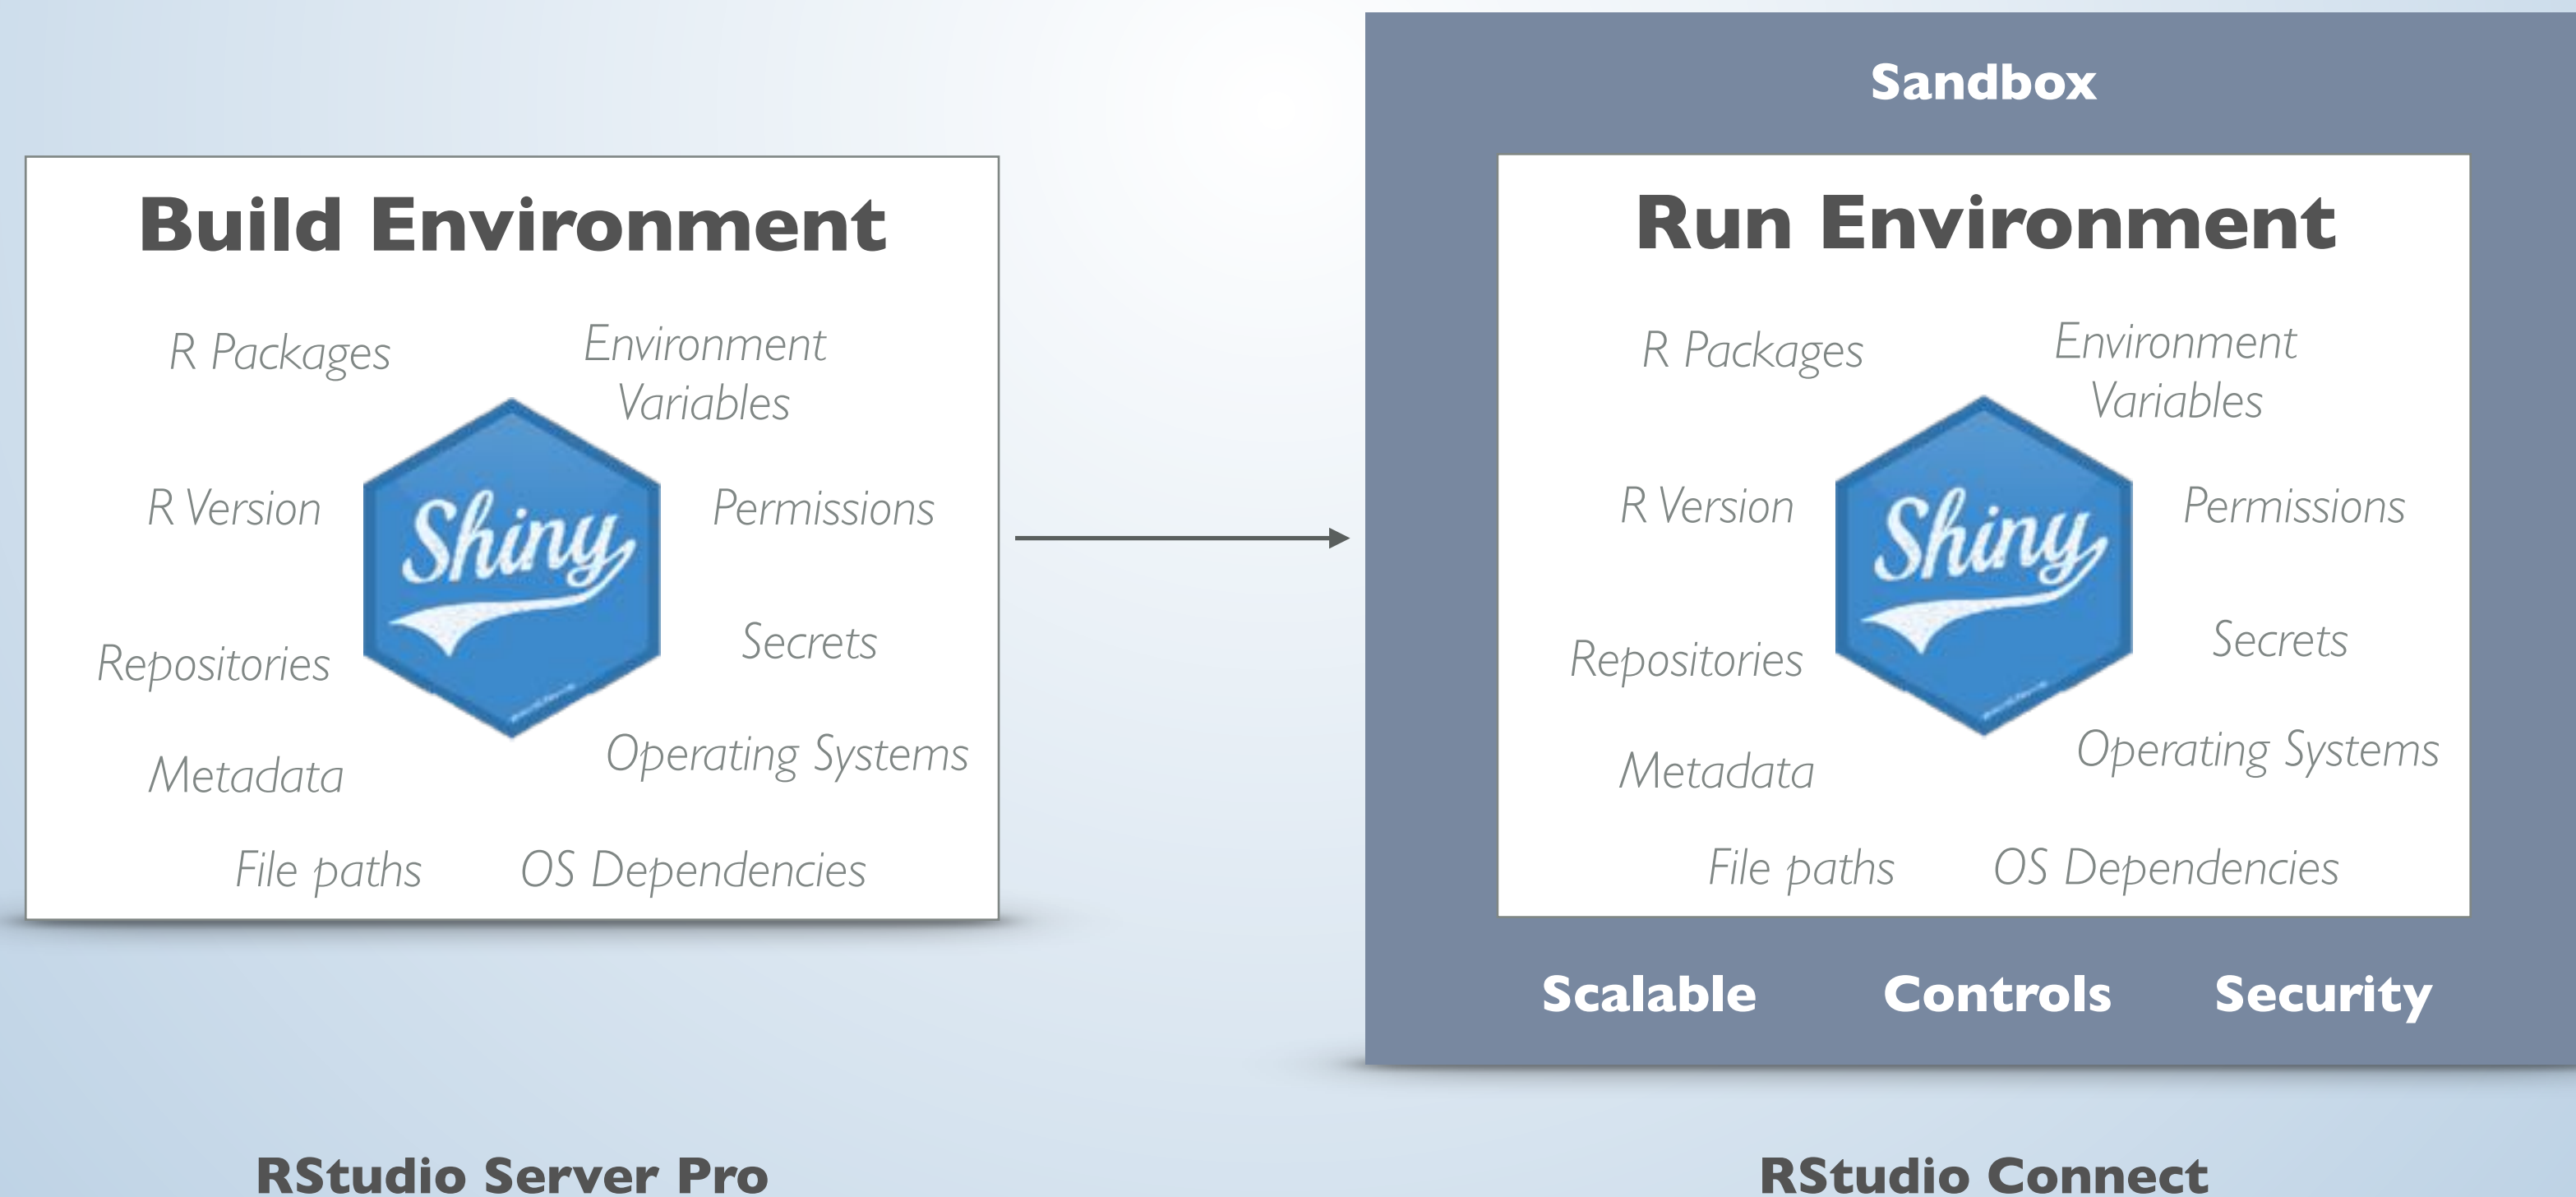

RStudio Connect
Run Artifacts

DEPLOYMENT GOALS

1. Reproduce the development environment
2. Productize the run environment

EXAMPLE: STOCK PORTFOLIO

Adoption

Rely on integrated R based solutions

CONNECT TO YOUR DATA

RStudio Data Connectors

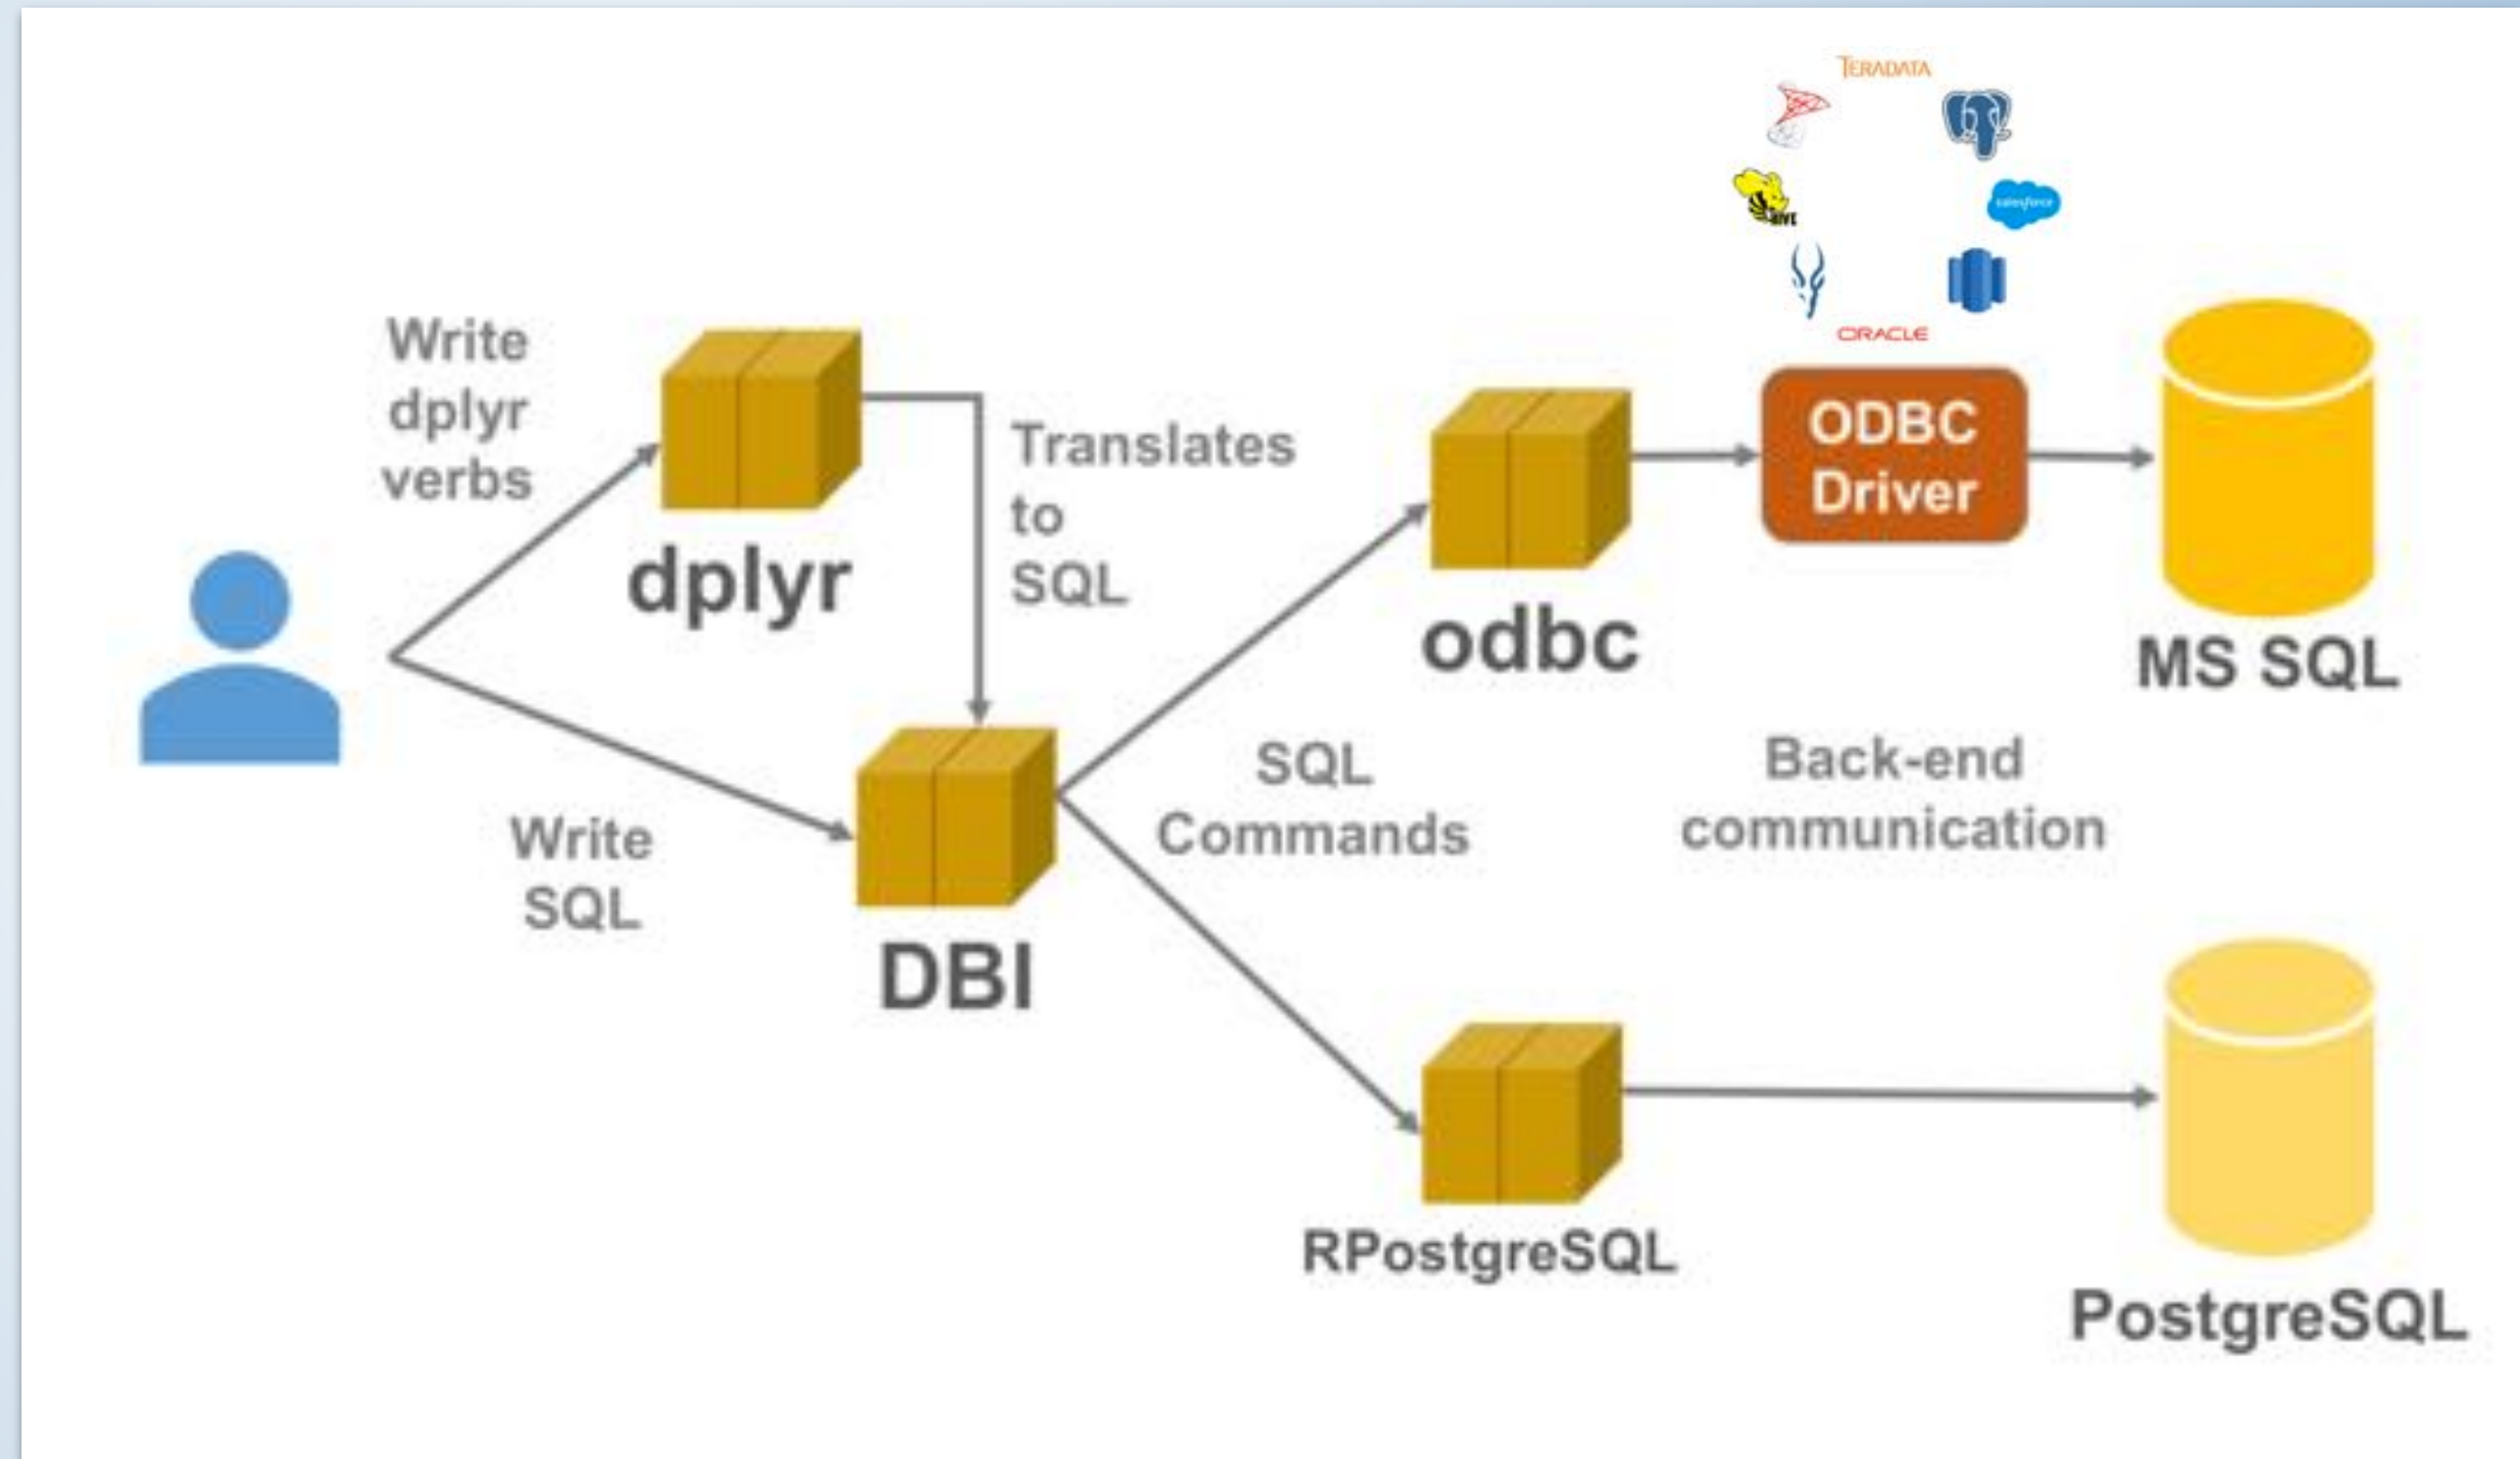

Work with all pro products

Fully supported

Easy to use

Easy to set up

Adheres to enterprise standards

COMMUNICATE INSIGHTS

Shiny Apps

Interactive

Delivered via the web

R Markdown Reports

Snapshot in time

Deliver via email or web

**Shiny
Apps**

**R Markdown
Reports**

**User
Experience**

Interactive
(Dynamic)

Snapshot
(Batch)

**Audience
Delivery**

Web
(Pull audience)

Email or Web
(Push to audience)

AUTOMATE DATA PRODUCTS

Schedule execution

Monitor logs

Track render history

Access source versions

CALL R AS A WEB SERVICE

What is an REST based API?

Software that lets computer systems communicate

Humans use GUI's

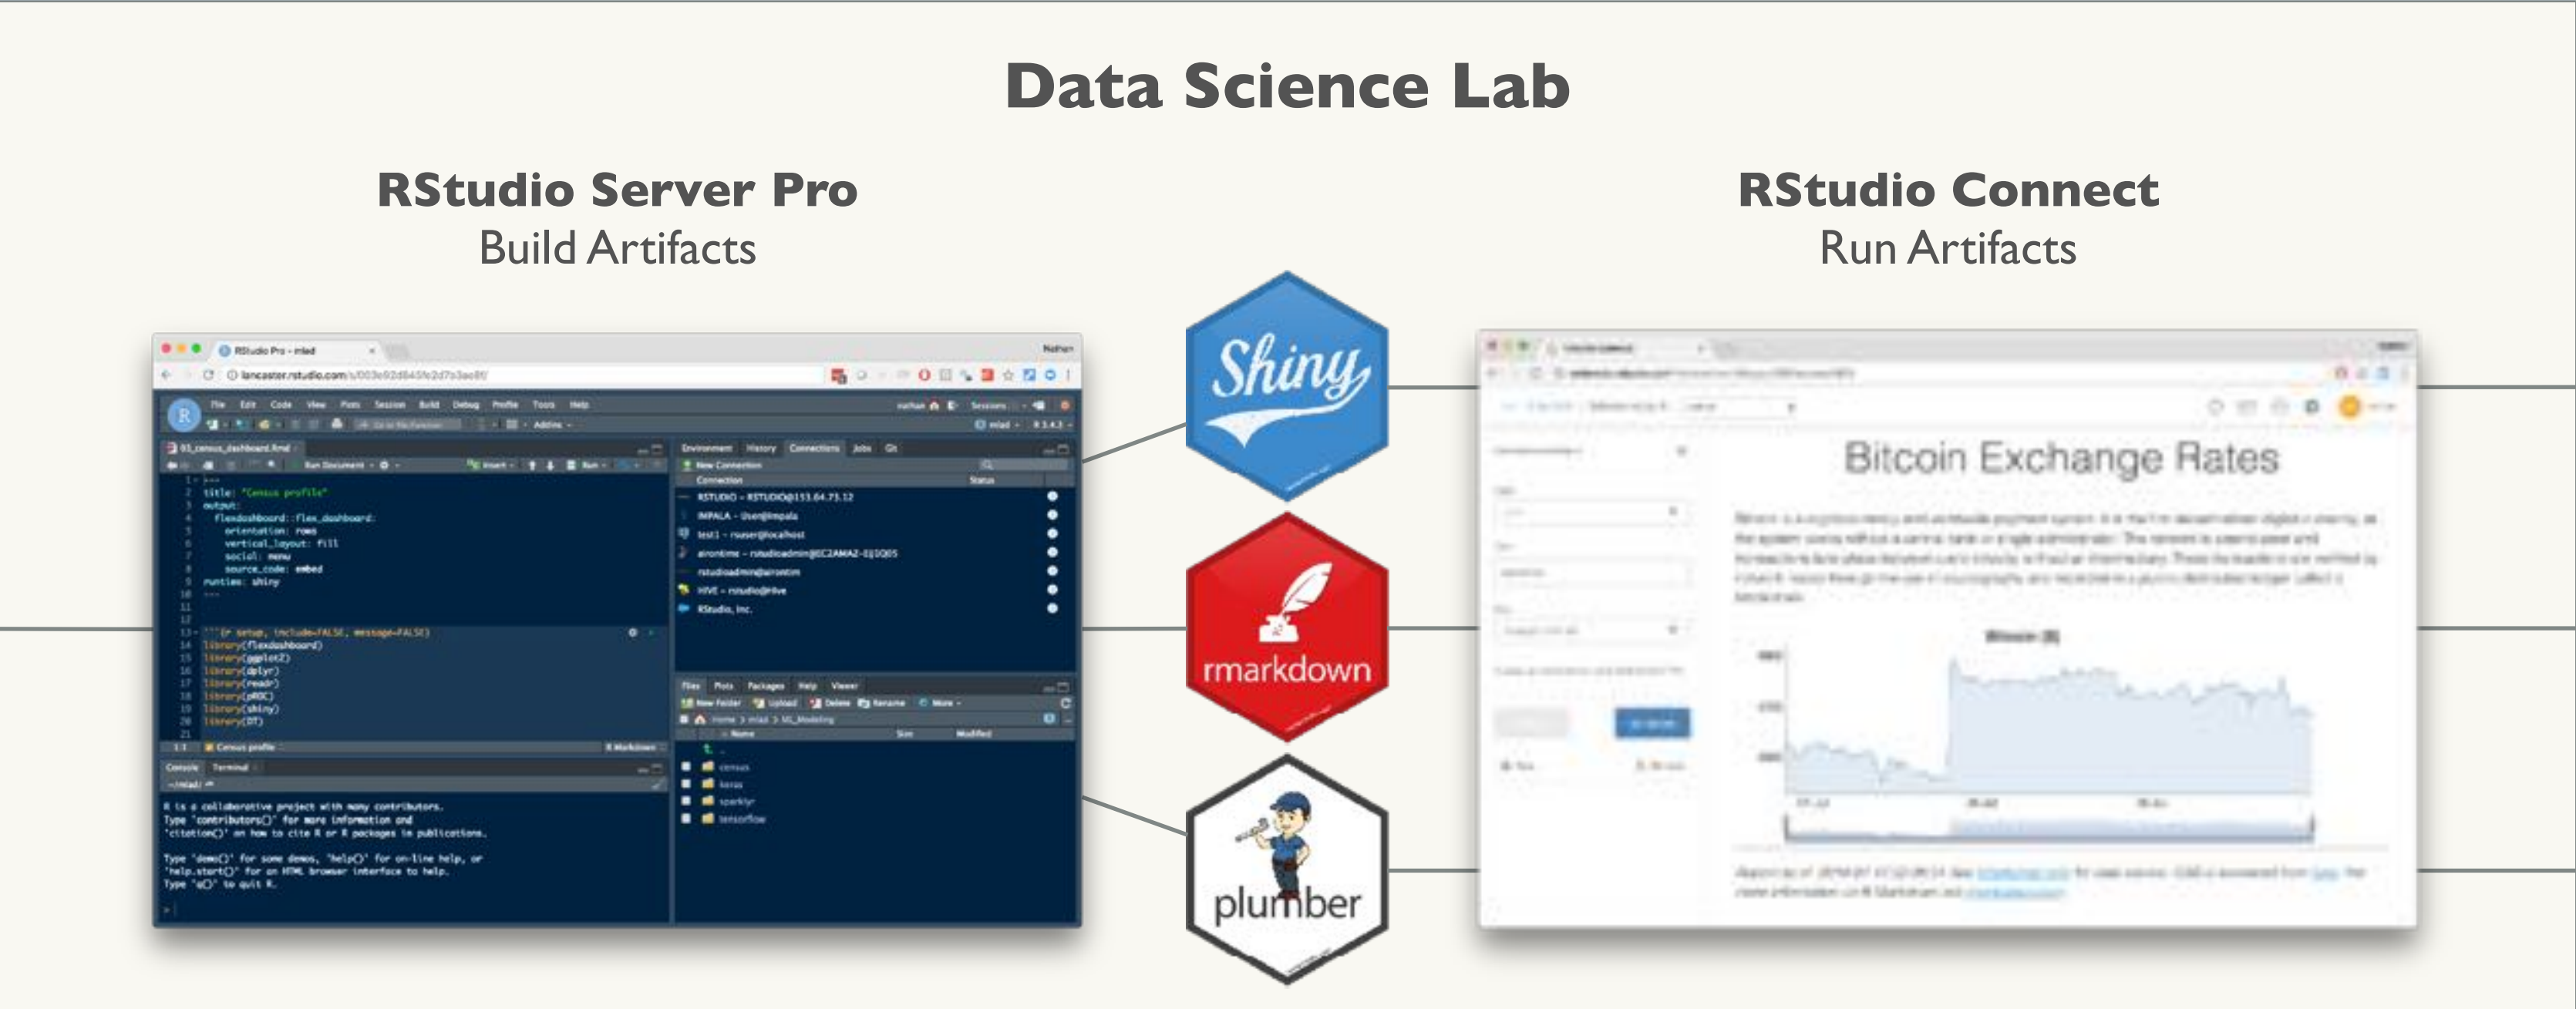

Machines use API's

Why are they important?

Solve the handoff problem

Integrate R into workflows

EXAMPLE: BITCOIN ARTIFACTS

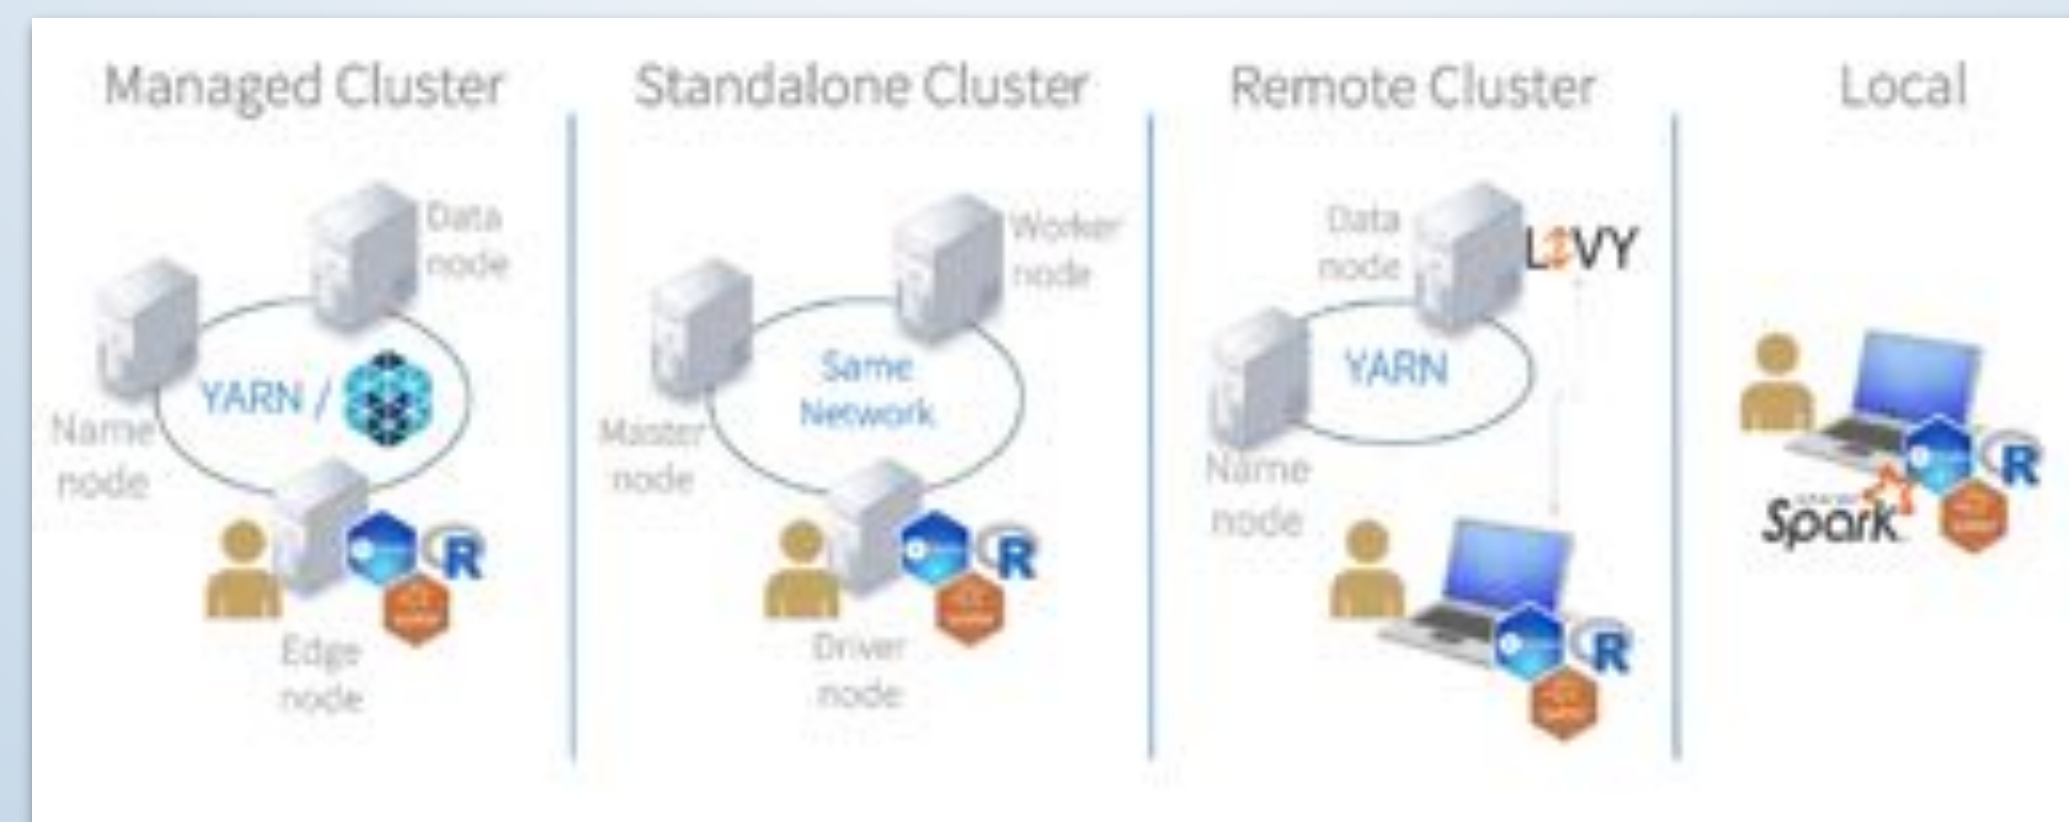

Integration

-  Webserver
-  Email
-  REST API

Use the full power of R with Apache Spark

Integrated with the RStudio IDE
dplyr backend
Works with Hadoop

PYTHON INTEROPERABILITY

Reticulate

Call Python from R

Translate between R and Python objects

Flexible binding to different version of Python

TensorFlow

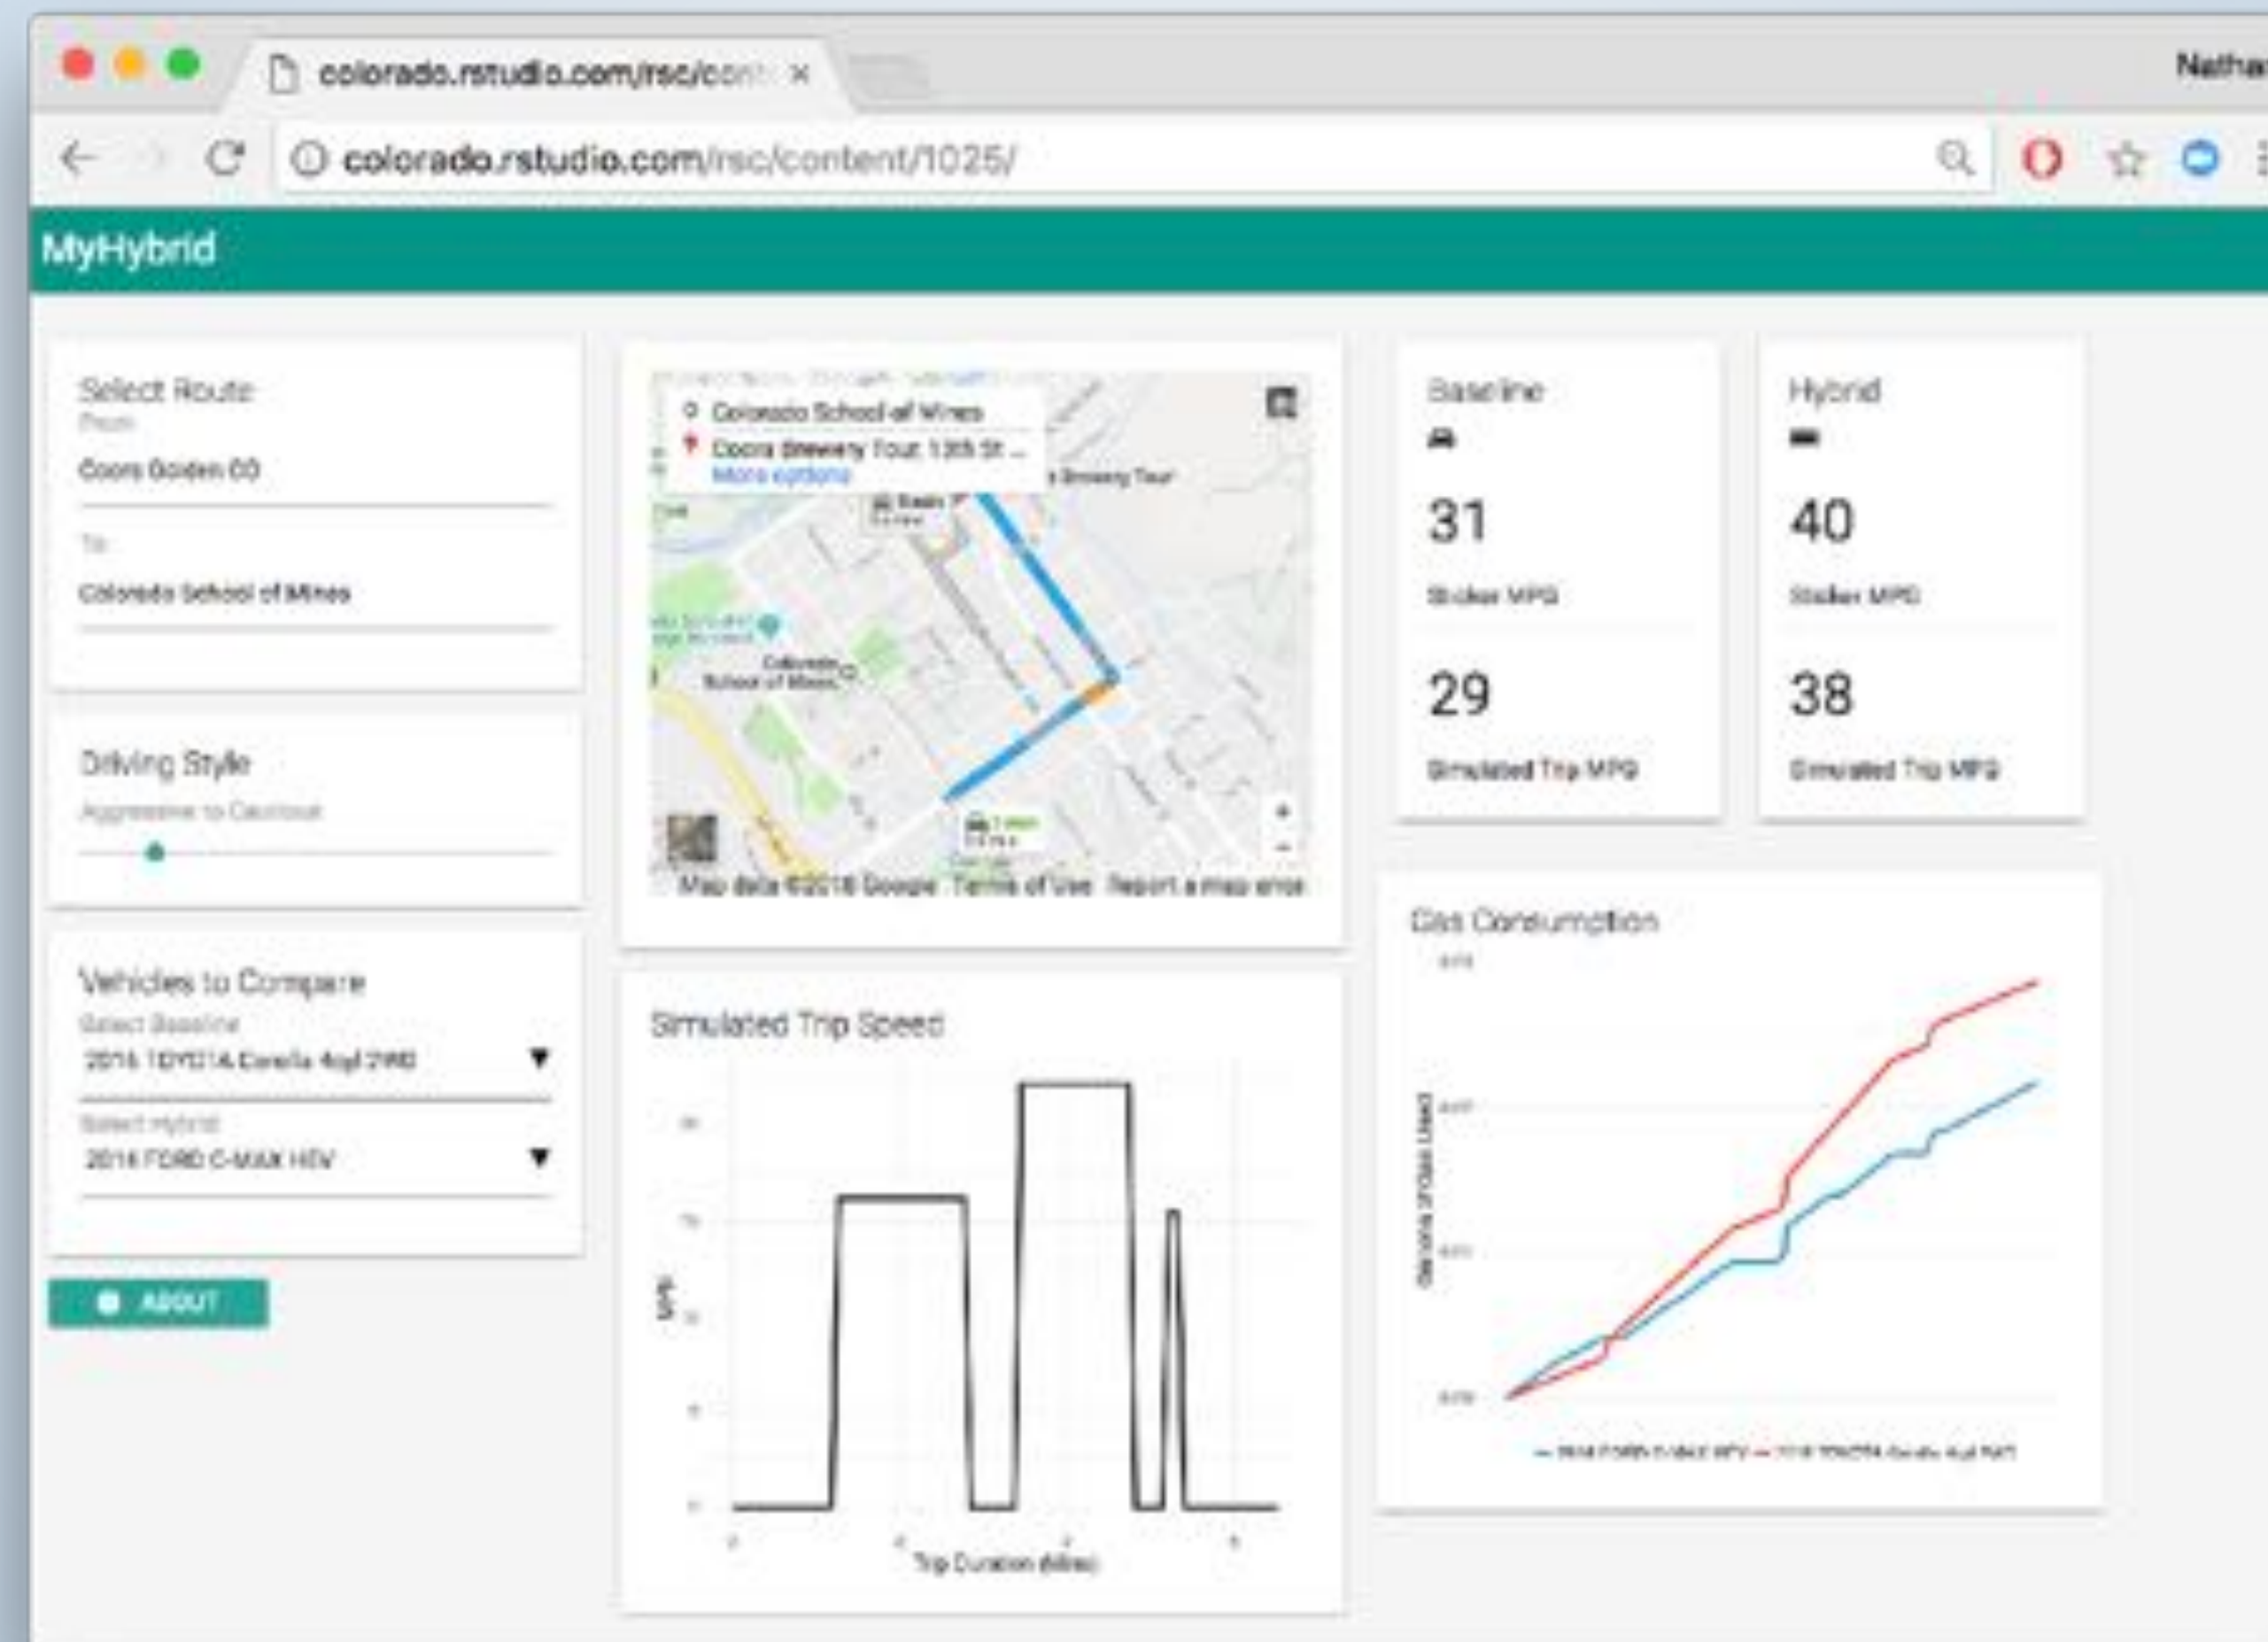

Open source software library for Machine Intelligence

Keras

High level interface for neural networks

EXAMPLE: RETICULATED SHINY APP

SHARED INFRASTRUCTURE FOR DATA SCIENCE

A new data science runtime

Powered by Apache Arrow

The R Admin

THE R ADMIN

A **data scientist** (who knows R) and works with **IT/Ops** to:

1. Establish R as an analytic standard
2. Promote best practices for R tooling
3. Make R indispensable to the organization

BEST PRACTICES AND RECOMMENDATIONS

Use a Modern OS and Browser

Upgrade R yearly

Build R from source

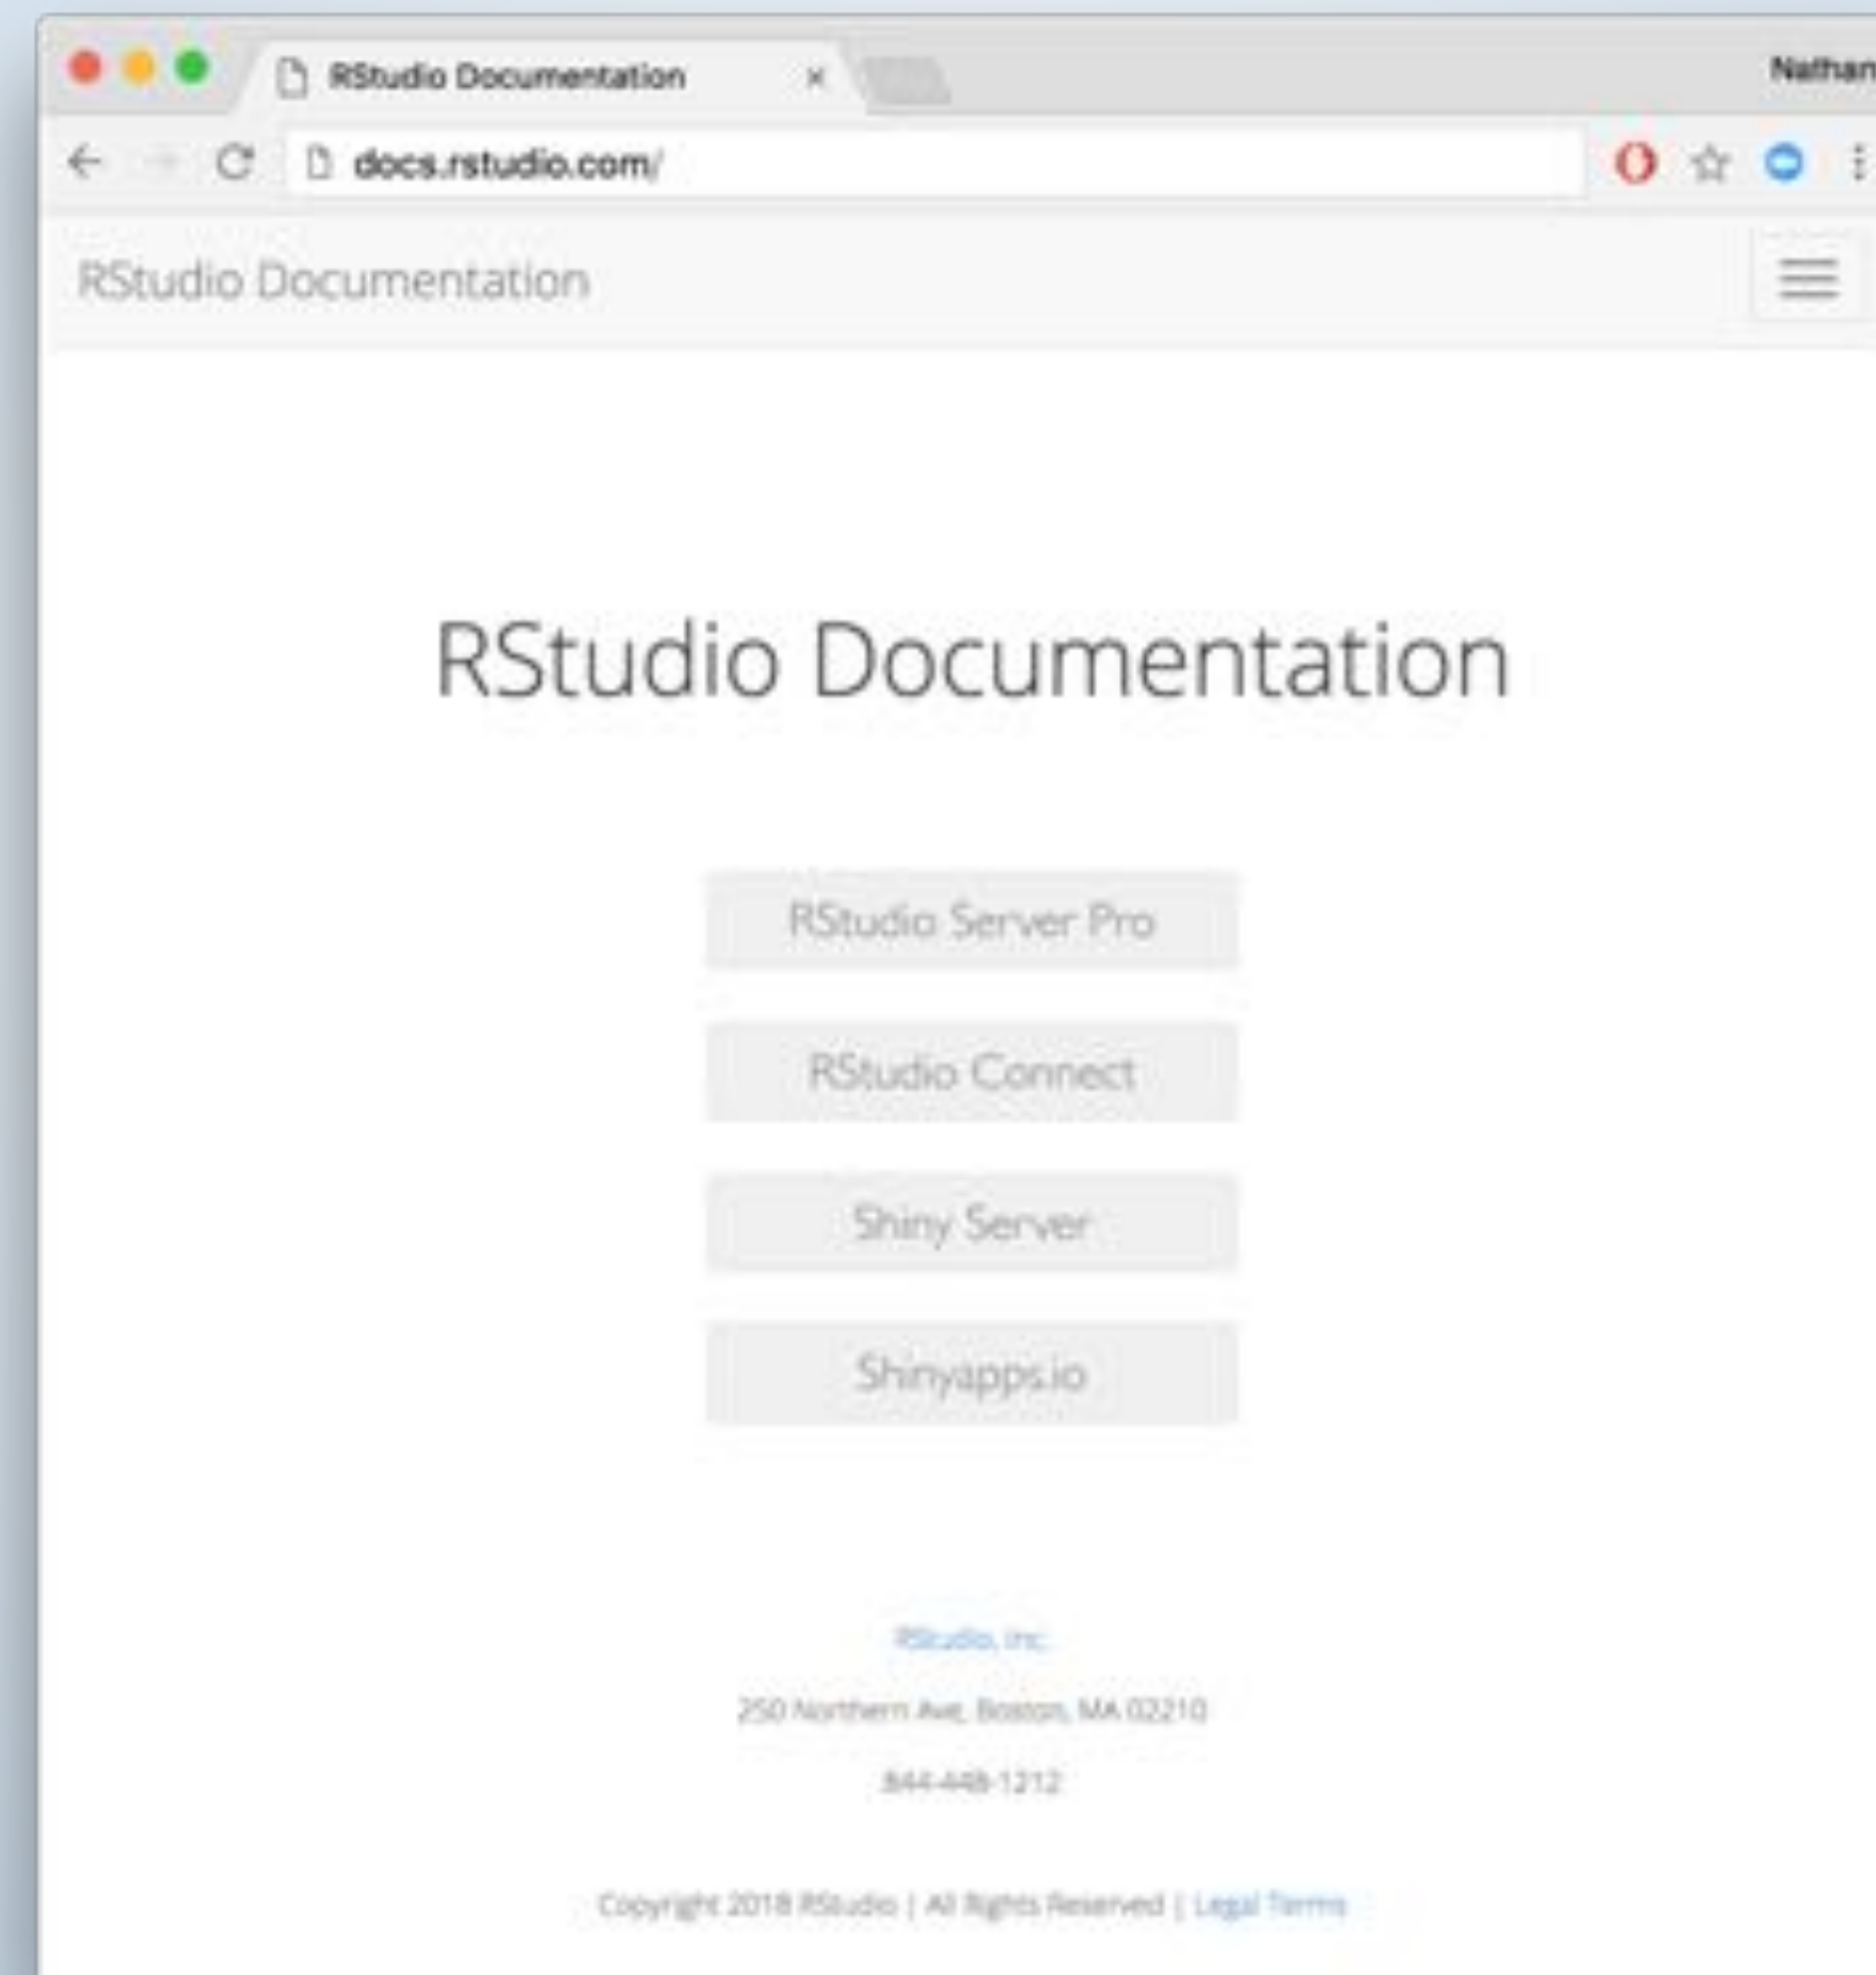

Size instance with plenty of RAM

THE R ADMIN HAS TO BE RAD!

They have a multiplier effect in their organization

rstudio::conf

Jan 15-18, 2019

Austin, TX

The screenshot shows the R Studio Community forum interface. At the top, there's a header with the R Studio logo and 'Community' text. Below the header, a category description states: 'This category is for discussions about R in production, at scale, and in complex environments.' There are navigation tabs for 'R Admins', 'all tags', 'Latest' (highlighted in red), 'New', 'Unread', and 'Top'. On the right, there are buttons for 'Edit', 'New Topic', and a search icon. The main content is a table of forum topics with columns for 'Topic', 'Users', 'Replies', 'Views', and 'Activity'.

Topic	Users	Replies	Views	Activity
Any admins at the 2018 rstudio::conf? <small>rstudioserver, conference</small>		0	32	5h
Access to raw application logs in RStudio Connect <small>rstudioconnect</small>		2	75	22h
Using R, RStudio and Rtools in a corporate environment <small>rstudio</small>		1	34	1d
Is non-root build of rstudio server supported or at least possible in principle?		0	51	3d
Package trust and vetting before installing		1	74	6d
Use Rstudio-Connect inside Docker <small>rstudioconnect</small>		2	81	9d
How to get started with R for production?		9	542	12d

SUMMARY

R for the Enterprise Roadmap

Legitimacy

Recognize R as an analytic standard

Competencies

Understand and manage R processes

Adoption

Rely on R based solutions

R Admin Call to action

Demonstrate the value of R

Build a sandbox / lab box

Get resources

Build a data science lab in production

Promote best practices

Make R indispensable

Integrate R artifacts into other systems
